Do you recognize the famous saying...

“AN OUNCE OF
PREVENTION IS WORTH
A POUND OF CURE”

BENJAMIN FRANKLIN

That's why we use
Thermal Imaging
for preventive maintenance.

Thermal imaging uses specially designed infrared still cameras to produce images called thermograms which show surface temperature variations.

- Detect heat created by excessive friction in mechanical systems
- Detect abnormally hot electrical connections or components
- Detect water leakage in under floor water pipes
- Detect heat loss and air leakage in building envelopes
